Business Continuity Protection Program

In light of the fact that pandemic business interruption is a fundamentally uninsurable risk, we offer this proposal to establish a voluntary federal program within the Federal Emergency Management Agency (FEMA) that would allow for the purchase of revenue replacement assistance for business interruption caused by viral pandemic or other epidemic infectious disease that have been federally declared as public health emergencies.

Congress should pass legislation creating the Business Continuity Protection Program (BCPP) and authorizing the Secretary of the Department of Homeland Security to name a director and stand up the program within FEMA with an effective date six (6) months after enactment of the legislation.

**Program Purpose**

- The program is designed to bolster the country’s economic resilience by providing timely and efficient financial protection including payroll, benefits, and expense support to the private sector in the event of a future declared public health emergency
- To enable interested businesses and nonprofit institutions to purchase access to revenue replacement assistance and thereby affordably obtain financial protection from economic shutdowns due to viral outbreaks not found in the private market

**Participating in the Program**

- **Eligibility** – Revenue replacement assistance will be available to any interested firm incorporated in the United States or a U.S. territory
  - All for-profit and non-profit entities would be eligible
  - Entities would not be barred from purchasing assistance due to size
  - Entities must enroll at least 90 days prior to a Presidential viral emergency declaration in order to receive assistance payments

- **Application** – The program director shall develop a simple program application process
  - An easy to complete, one-page electronic application form for participants
  - Program director would request the business’ previous one to two years of annual tax returns to determine expected assistance benefit
    - IRS Form 1120 (e.g., Lines 13, 14, 16, 17, 18, 23, 24 and 26)
    - Form 990 (e.g., Lines 15, 17, etc. – similar to above 1120 lines)
    - Other official forms as the program director allows
  - Businesses with physical locations in more than one state would specify the allocation of risk at time of purchase (EX: 40% of their revenues in NJ and 60% in NY)
  - Provide the business categorization based on the North American Industry Classification System (NAICS) for purposes of determining assistance benefit formula based on closure status
  - The business owner would be required to attest to certain things on the application
• The facts of the application
• Future compliance with federal CDC, OSHA, and other specified guidelines
• That the funds would be used to retain employees and keep the business viable
  o The Program should work with risk mitigation experts (e.g., the IBHS’ Open for Business-EZ program, the International Organization for Standardization [ISO], and/or others) to develop viral risk mitigation guidelines and safety standards for businesses that would be provided at time of application and payment

• **Term of Participation** – The initial availability of participation in the program would start six (6) months after the date of enactment and each certificate issued would be valid for up to one year
  o Once purchased, the program director would provide the details (amount, frequency, and other information) related to the expected assistance benefit

• **Renewal** – Once purchased the terms of participation cannot be cancelled or altered, but participation is guaranteed to be renewable on an annual basis
  o Participating organizations will be required to submit updated tax information with each annual renewal to provide ongoing proof of revenue and expense information
  o Participating organizations will also be required to review, select, and purchase assistance annually

**Distribution Network**
• The successful support of the U.S. economy during the next pandemic will require a robust level of participation in the BCPP
• Licensed insurance agents and brokers will be authorized to act as the distribution network to market and sell the program’s revenue replacement assistance
• The program director will establish an administrative fee for application and enrollment servicing

**Revenue Replacement Assistance**
The program would provide participating entities with revenue replacement assistance based on a percentage of the participant’s total payroll and expenses
• Participants could receive up to a maximum of three (3) months relief
• Assistance amount would be for up to 80% of:
  o Ordinary payroll and employee benefits;
  o Contractually obligated payments;
  o Rent or mortgage obligations for commercial property;
  o Other loan obligations;
  o Equipment rental and maintenance costs;
  o Tax and insurance payments; and
  o Other categories of acceptable expenses as the program director see fit to promulgate by rule
• No profits, extra expense, or other costs would be considered as part of this program
• Participating entities could choose from desired levels of protection that would be pre-
determined by the program director (i.e. 20%, 40%, 60% - up to a maximum of 80% of the
program determined expenses)
• The program director would also develop a pre-determined formula for any partial or non-
payment based on determinations of an “essential business” by closure order / presidential
declaration

Pricing for Assistance
The program director shall from time to time provide by regulation for general terms and conditions
regarding the amounts paid for access to the program’s revenue replacement assistance
• Rates charged by the program will be calculated as a percentage of revenue each participating
organization seeks to replace (payroll and applicable expenses)
• That percentage will be uniform for all participants, and will not vary based on geography or
industry
  o The risk of pandemic business interruption presents a unique case in which risk-based
    premiums could actually induce even greater moral hazard
  o A risk-based model would require firms most likely to be vectors of viral transmission—
    such as restaurants or hotels—to pay higher rates
  o That would have the effect of depressing the take-up of the program protection and
    make it more likely that businesses would resist closing their doors
  o Aligning public health interests with policy design recommends instead pricing coverage
    to maximize take-up by those firms most exposed to the risk of pandemic to align
    incentives properly for a public health-oriented program
• The program director would set appropriate minimum amounts for assistance
• Pricing would include a charge for administrative costs
• Pricing would be designed to ensure widespread take-up and reduce moral hazards
• The program director would develop a payment plan option

Assistance Payment Trigger
Revenue replacement assistance would be parametrically triggered and disbursed automatically based
on a formula and the protection level selected
• Public health emergencies generally are declared by state and/or local officials, however,
  deferring to such declarations to trigger coverage under the BCPP could run afoul of the
  nondelegation doctrine
• Based on the on-the-ground situation, states would request a federal viral emergency
declaration
• The contours of the presidential emergency declaration would be laid out in the authorizing
  legislation which would include the states and business codes of the industries impacted
• The presidential viral emergency declaration would automatically trigger payment
**Assistance Payment Process**
Once a presidential viral emergency has been declared and BCPP assistance triggered, payments will immediately be disbursed based on a pre-determined formula

- Provided access to assistance was purchased 90 days prior to the presidential declaration, payments would be wired electronically without waiting periods or further requirements
- Participating firms would receive the first full monthly benefit upfront, with additional payments for additional months distributed as needed at 30 and 60 days (for the maximum 90-day protection period)
- Declaration of a public health emergency in a state where a participating business is located would trigger assistance for that portion of a participating organization’s expenses located in the emergency zone (as allocated in the application form)
- There would be no traditional claims or claims adjustment process
- Payments would be distributed directly from the federal government to the program participants

**Program Asset Management**
The program director shall be responsible for the careful management of the BCPP’s accrued assets year-over-year

- In years without losses, which should be most years, collected program funds could be used to purchase Treasury securities, which would be credited under federal budget rules as program assets
- Because the program’s exposure in any loss year is likely to exceed its available assets, the program should be granted authority to borrow from the Treasury to pay all recorded losses
- To the extent that demand exists for risk transfer at some price and attachment point, the program director could be authorized to retain brokerage services to leverage coverage by using participant payments to place traditional reinsurance or issue insurance-linked securities

**Auditing Process / Penalties**

- A final audit and accounting of all funds will be completed annually by the federal government no later than 12/31 for any fiscal year ended 9/30
- The program director will establish a post-event auditing process for beneficiaries of the BCPP to ensure the validity of application attestations
- Any participating firm found to have knowingly defrauded the program will be expelled and be subject to stringent penalties, including fines and jail time
- The program director shall be granted clawback authority to require the return of benefits not applied to allowable expense categories

**Miscellaneous**

- The BCPP would be run by FEMA, with limited administrative assistance from private contractors
- Businesses purchase revenue replacement assistance through state-regulated insurance entities that voluntarily participate with the BCPP
• Entities marketing the program or contracting with FEMA to administer the program would not assume any liability for the application process or the determination and payment of benefits
• Aggregated data on prices and payments would be publicly available
• The BCPP shall work with state insurance regulators and private markets over time to help facilitate additional gap and excess coverage to provide businesses with additional protection options
